

AKHIL REDDY APURI

+1(475) 227 7656 | akhilapuri17@gmail.com

PROFESSIONAL SUMMARY

Results-driven Software Engineer with 3+ years of experience building, scaling, and deploying high-availability, production-grade applications for enterprise and academic environments. Proven track record of improving system performance, reducing release cycles, and supporting users through clean architecture, secure APIs, and automated CI/CD pipelines. Strong expertise in Java, Spring Boot, React, RESTful APIs, microservices, and cloud-native development. Trusted contributor in Agile teams delivering business-critical systems end-to-end.

TECHNICAL SKILLS

Programming	: Java, Python, C, C++, JavaScript, TypeScript, SQL.
Frontend	: HTML, CSS, React.js, Angular, Next.js, Node.js.
Backend	: Spring Boot, Spring Security, REST APIs, Microservices, JWT, OAuth 2.0, Junit.
Database	: MySQL, MongoDB, PostgreSQL, Query Optimization, Indexing.
Cloud, DevOps & Tools	: AWS (EC2, S3, Redshift), Docker, Kubernetes, Jenkins, CI/CD Pipelines, IntelliJ IDEA, Eclipse, Git/GitHub, VS Code.
Frame Works & Libraries	: Spring Framework, Unix/Linux, Junit.
AI & Machine Learning	: PyTorch, NumPy, Scikit-learn, Model Inference Pipelines, Basic Neural Networks, Data Preprocessing.
Other Skills	: Agile (Scrum), SDLC, Operating Systems, Computer Networks, Object-Oriented Programming, Concurrency Basics.

PROFESSIONAL EXPERIENCE

Local Grown Salads

United States

Full-Stack Developer | Tech Stack: Java, React, RESTful, PostgreSQL, Docker, CI/CD with Jenkins

June 2025 – Present

- Architected and delivered a full-stack internal platform used by agronomists and farmers to manage 100+ products and packages, increasing operational visibility and data accuracy across teams.
- Designed and implemented scalable backend services integrating 5+ complex relational datasets (grow formulas, nutrients, soil, environment), enabling AI/ML-driven yield optimization workflows.
- Modeled and optimized 30+ normalized database entities, improving query efficiency, reducing data redundancy, and enabling real-time data exchange across critical modules.
- Accelerated release velocity by actively contributing to Agile sprints, CI/CD automation, and containerized deployments using Docker and Jenkins, ensuring reproducible builds and zero downtime handoffs.

University of North Carolina at Charlotte

Charlotte, NC

OneIT Full-Stack Developer | Tech Stack: Java, Spring Boot, React, REST APIs, Angular, JWT

Aug 2024 – May 2025

- Engineered and scaled high-performance backend services using Java and Spring Boot, improving API response times by 35% and reliably supporting 10,000+ daily active users.
- Modernized frontend architecture by refactoring 15+ legacy JavaScript modules into Angular + TypeScript, reducing code duplication by 25% and significantly improving maintainability.
- Implemented enterprise-grade security with Spring Security, OAuth 2.0, and JWT, enforcing role-based access control and safeguarding sensitive academic data for 50,000+ users.
- Built automated testing pipelines achieving 85%+ unit and integration test coverage, reducing post-release defects by 40% and increasing deployment confidence.

Ceremorphic

Hyderabad, India

Software Engineer | Tech Stack: Java (Spring Boot), React, REST APIs, PostgreSQL, Jenkins, Docker, Kubernetes, JWT, JUnit

Sep 2023 – Jul 2024

- Designed and scaled 20+ Spring Boot microservices and RESTful APIs, supporting thousands of daily API requests while improving backend scalability and ensuring consistent performance in production environments.
- Improved application performance by 28% by optimizing PostgreSQL queries, implementing efficient pagination strategies, and refactoring backend service logic, significantly enhancing API response times.
- Reduced release cycles by 20% by automating CI/CD pipelines using Jenkins and deploying containerized services with Docker and Kubernetes, enabling faster and more reliable production deployments.
- Increased system stability by 35% by implementing JWT-based authentication and developing comprehensive JUnit unit and integration tests, proactively reducing production defects and security risks.

EDUCATION

University of North Carolina at Charlotte, Charlotte, NC

Aug 2024 – Dec 2025

Master's in Computer Science

CGPA : 3.9/4

- Relevant Courses:** Data Structures and Algorithms, Artificial Intelligence, Software System and Design Implementation, Visual Analytics, Database Systems, Big Data Analytics, Data Mining, Computer Communication & Networks.

PROJECTS

LODGE-Long Dance Generation using Deep Learning | PyTorch, NumPy, SMPLX, 3D Rendering, Inference Pipelines.

- Designed and implemented a PyTorch-based inference pipeline to generate audio-conditioned 3D human motion using SMPL-X parametric body models, structuring modular components for preprocessing, model execution, and post-processing to ensure scalability and reproducibility.
- Optimized tensor operations and memory utilization within the inference workflow, reducing rendering latency and improving throughput while maintaining high-quality motion generation outputs for experimental evaluation.

FARMEASY – Smart Agricultural Equipment Exchange Platform | HTML, CSS, JavaScript, PHP, MySQL.

- Designed and developed a full-stack marketplace platform enabling farmers to securely exchange agricultural equipment, implementing RESTful workflows, user authentication mechanisms, and structured backend request handling.
- Modeled relational database schemas with normalization and indexing strategies, improving query performance by 30% under concurrent access and ensuring scalable transaction processing for multiple user sessions.
